

Single Dispenser

Double Dispenser

Triple Dispenser

- 1) Shower dispensers can be securely mounted to most surfaces using our double-sided tape method, and this is preferred for glass & mirror surfaces. The other option is the anchor & screw method which has its own installation guide.
- 2) When ordering your dispenser units, you should have indicated that you wanted double-sided tape affixed to the dispenser backs. If you didn't, please reach out to your ReadyCare account representative and pre-cut mounting tape sections can be provided.
- 3) Remove bottles from the dispenser and make sure your mounting surface is clean & dry before starting your installation.
- 4) Determine the exact height that you would like the dispenser to hang. If installing more than one unit, check to see that you can install all dispensers at a uniform height. Be sure to double check that there are no shower heads or fixtures in the way of your installation locations.
- 5) Mark your selected positions for your dispensers. Then remove the blue backers from each dispenser and press firmly in place for 30 seconds.
- 6) We also recommend placing a small bead of clear or white caulk around the outside edges of each dispenser unit. This will prevent water and residue from getting behind the dispensers.
- 7) Wait 15 minutes for the mounting tape to set and your caulk to dry. While you wait, you can start filling your bottles with bulk liquid product provided by ReadyCare. After the 15 minute wait, insert your bottles into your dispenser.

Dispenser Cleaning & Maintenance Suggestions

- All dispenser bottles are flame-treated and silk-screened with special ink to maintain their original color for years in wet shower conditions.
- Dispensers should only be cleaned with soap and water. If you use a steam cleaner or other chemicals to clean your shower area, we recommend covering your dispenser bottles to keep them from being exposed to harsh chemicals.
- We suggest that you completely wash out your dispenser bottles at least once every two months. The bottles easily pop out of the brackets so that they can be cleaned. Soap and shampoo bottles do not need to be cleaned as often as lotion and conditioner bottles.
- Many customers choose to purchase a matching set of spare bottles and do a complete switch out once every two months. They thoroughly wash the old bottles and are ready for their next switch in two months.
- The pump tops are very durable and should last six months to a year. To keep your pump tops working properly, they should be cleaned two or three times per month by simply pumping warm water through them.
- Spray dispensers requires a little more routine maintenance than pump tops. The sprayer top should be wiped down daily with a warm towel as hair spray is a sticky substance and can clog the sprayer if not cleaned regularly.
- Once a month, we suggest you either replace the sprayer top with a new one or unscrew the sprayer and pump warm water through it. If the sprayers are not spraying a fine mist all the time, then you need to be cleaning or replacing them more often. Your spray coils should be replaced every six months.
- Dispenser brackets should also be cleaned regularly to prevent residue build up and the best time to do this is when you're exchanging bottles.
- Overall, a regular maintenance program will increase the life of your dispensers and give your members & guests a more pleasant experience in your locker room.
